Meredith,

I wanted to provide an update on the Envincio production. They are currently planning the next production of imidacloprid 2F (87276-6) at the end of August and another in October. If the facility can't do them both (August and October), then it will all be done at the end of August (this will cover them for all of 2014). They will be printing labels in January, or possibly as early as December – again for all of 2014.

-Janelle

Subject: Neonicotinoid production information

Meredith,

Since the letter was sent electronically, I presume that responding electronically, via email, will be acceptable. If you need this information submitted via hard copy and/or included on letterhead (submitted electronically), please let me know. Below is the production cycle and label information for the companies listed:

Ensystem

For its liquid products, it produces product and prints labels on demand, generally every 1-2 months, depending on demand. For its granular and wettable powder products, it usually produces product about once per year. They currently have enough stock to last another year+ and, as such, they aren't sure when the next production will be.

Tide

In 2013, there were two production cycles: one in March and one in June. Labels are printed to match production and are usually printed one month before the next production cycle. It is estimated that production will be in the same months in 2014 and the next label printing will likely occur in January or February of 2014.

Amtide

In 2013, there were two production cycles: one in March and one in June. Labels are printed to match production and are usually printed one month before the next production cycle. It is estimated that production will be in the same months in 2014 and the next label printing will likely occur in January or February of 2014.

Envincio

I don't have all of the production information yet. Some products are produced every few months, other products are produced when their source produces the product. They have enough labels (and some product, depending on the product) to last into 2014 so they aren't sure when the next label printing might be for any of their products; they are trying to get more information on this and I can update when I receive that information.

I will not be responding for Willowood; that will be handled by Jim Wagner. Hopefully you understand that the above information is considered confidential but also subject to change depending on demand and existing stocks. Let me know if you have any questions.

Regards,

Janelle
